1-What is Von Neumann Architecture?

1)Single Bus, Unified Memory 2) Single Bus, Separate Memory

3) Multiple Bus, Unified Memory 4) Single Bus, Separate Memory 5)?

2-What is Harvard Architecture?

1)Single Bus, Unified Memory 2) Single Bus, Separate Memory

3) Multiple Bus, Unified Memory 4) Single Bus, Separate Memory 5)?

3-Is there any better architecture?

1)Yes 2)No

4-What is the main memory?

1)A memory out of the CPU 2)An internal Memory

3)A high speed disk 4)A high performance 5)?

5-What is “Internal cache”?

1)A high speed memory 2)Content addressable Memory

3)A high speed memory with same technology of the CPU 4)2 and 3 5)?

6-What is “External cache”?

1)A high speed memory 2)Content addressable Memory

3)A high speed memory with same technology of the CPU 4)2 and 3 5)?

7-What is a register?

1)A high speed memory 2)Content addressable Memory

3)A high speed memory with the same technology of the CPU 4)2 and 3 5)?

8- Between “External cache” and “Internal cache” which one is faster?

1)External Cache 2)Internal Cache 3)It is technology dependent

4)The speed is the same 5)?

9- Between “Internal cache” and “Register” which one is faster?

1)Internal Cache 2)Register

APPROVED

10- A minimum configuration ALU can be made using:

1)an Adder and NAND gate 2) 1)an Adder and Or Gate

11-A More sophisticated ALU can be made using:

1)an Adder and NAND gate 2) 1)an Adder and Or Gate 3)?

12-Do you think that “cache level3” is useful?

1)Yes 2)No

13- Why we use level1 and level2 caches?
